Profile.

Full-stack Roblox developer building live multiplayer experiences since 2024. I have shipped gameplay systems and interfaces for seven titles with more than 73 billion combined visits, including the gears and tools of Steal a Brainrot. I also create my own games: I wrote all the code for Fight A Lucky Block and Gas Station. I work across the whole stack, with solid systems underneath and polished interfaces on top.

Experience.

Creator & Full-Stack Developer

2026 — Present

Original titles

- Launched **Fight A Lucky Block**, an experience about battling with Lucky Blocks, carrying them back to base and opening them to win ever-rarer brainrots: 23M+ visits and 637K+ favorites, previously run on a steady update cadence.
- Created **Gas Station** and have operated it since launch.
- Wrote the entire codebase of both titles, server and client.

Roblox Developer, Contributor

2024 — Present

Studio titles

- Steal a Brainrot** Full-stack Built the game's gears and tools, from launch through late 2025.
- Anime Weapons** Full-stack Developed complete systems, from joining at the turn of 2026 through the latest update.
- MushYO!** Full-stack Developed complete systems, from launch through the end of 2024.
- Anime Clash** Frontend Developed complete front-end systems, from launch through the latest update.
- Rope an Animal** Frontend Front-end improvements and game feel since launch; still supporting the game with smaller tasks.
